SUMMARY

I am a 2nd-year CSE student and full-stack developer with experience in building production-ready systems in healthcare, civic governance, and fintech. My technical skills have allowed me to deliver over 120 APIs, engineer zero-knowledge encryption solutions, and integrate AI technologies into real applications. I am a strong communicator with team leadership experience and have a background in technical writing.

EXPERIENCE

NEXERA

Chief Technical Officer (Nov-2025 - Present)

Leading the Nexera Tech department, owning all technical and product decisions across the project.

Architect and building the core web application, including dashboards, content discovery, and platform flows

PROJECTS

Onyx(Showcased in hackathons, tested by judges)

AI-powered DAST platform for automated vulnerability detection and remediation.

Built a high-concurrency scanning engine integrating Subfinder, Nmap, and Nuclei with custom logical probes for SQLi, SSRF, and IDOR detection.

Developed an AI-driven triage system using Claude/Llama models to analyze raw scanner outputs, achieving 90%+ accuracy in deduplicating positives.

Integrated automated remediation logic via GitHub App API to verified security Pull Requests, reducing Mean Time To Repair (MTTR) by ~70%.

Finstar(100+ positive reviews)

Gamified finance education focused on engaging teens through interactive game modules

Developed 4 interactive game modules (Life swipe, Budget Hero, Market Explorer, Quiz Battle) with emotion-aware scoring that work in integration with learning modules that are specially designed for Gen-z teens.

Engineered a robust database on Firebase backed by Supabase edge functions for data integrity and atomic operations as well as a complex Ai backed market simulation

AI Health Companion(8 context aware agents in one system)

Context aware health understanding platform bridging raw complex health data and patients.

Built a safety-first, context aware AI health platform that explains symptoms and medical reports without diagnosing, using RAG, user history, and strict guardrails

Engineered a deterministic risk detection system to surface early health warning patterns across logs, vitals, and lifestyle data

Implemented medical-safe AI workflows including report analysis, multi-assistant routing, and emergency escalation logic.

Codeswipe(100+ pre-registers)

Swipe-based developer collaboration platform (frontend design & engineering)

Designed a swipe-based, mobile-first frontend for a developer collaboration platform using React and Framer Motion

Implemented gesture-driven cards, animations, and responsive layouts with Tailwind CSS

Built reusable UI components and state-driven flows focused on UX performance and clarity.

HealthVault()

Encrypted Digital Health Records system focused on patient privacy and data security

Built a zero-knowledge health record system with AES-256-GCM client-side encryption

Developed 30+ APIs enabling secure medical data access/sharing and instant revocation

Implemented QR based access control and Integrated AI for patient-friendly + clinical summaries (40% easier comprehension)

KEY ACHIEVEMENTS

Achievements in Hackathons and Systems Development

- Winner of IEEE T-Hacks 8.0: 2nd place among 200+ participants (24-hour build)
- Winner of Shloka Decode 2.0
- Finalist, B-Plan e-Summit 2025: Top 10/200+ teams.
- Achieved 100+ pre-registration on my project.
- Made a Health platform with 8 AI agents overnight for a 36hr live hackathon.
- Built production systems across healthcare, civic, fintech, networking, edtech domains.

SKILLS

Python

JavaScript

React

FastAPI

RAG

Postgres

Node.js

MongoDB

Next.js

Vector DBs

AI-tools

AI Agents

Git

Docker

INTERESTS

Interest Areas

- AR & spatial computing
- AI technologies in real world use cases
- Computer vision
- Fintech innovation
- AI agents and tools
- Technical writing

EDUCATION

B.Tech

Guru Gobind Singh Indraprastha University (GGSIPU)

08/2024 - 05/2028 • Delhi

Class XII

AES Dr. KRBM Sr. Sec. School

04/2010 - 04/2023
